16. ABSTRACT
Annual total phosphorus and total nitrogen loadings to the lake were estimated and subdivded according to either point or non-point source origin. An assessment of the lake's trophic condition and limiting nutrient is also provided. All data collected by the U.S.E.P.A. National Eutrophication Survey during the one year study of the lake and its tributaries are included in the report.

FOREWORD

The National Eutrophication Survey was initiated in 1972 in response to an Administration commitment to investigate the nationwide threat of accelerated eutrophication to fresh water lakes and reservoirs.

OBJECTIVES

The Survey was designed to develop, in conjunction with state environmental agencies, information on nutrient sources, concentrations, and impact on selected freshwater lakes as a basis for formulating comprehensive and coordinated national, regional, and state management practices relating to point-source discharge reduction and non-point source pollution abatement in lake watersheds.

ANALYTIC APPROACH

The mathematical and statistical procedures selected for the Survey's eutrophication analysis are based on related concepts that:

a. A generalized representation or model relating sources, concentrations, and impacts can be constructed.

b. By applying measurements of relevant parameters associated with lake degradation, the generalized model can be transformed into an operational representation of a lake, its drainage basin, and related nutrients.

c. With such a transformation, an assessment of the potential for eutrophication control can be made.

LAKE ANALYSIS*

In this report, the first stage of evaluation of lake and watershed data collected from the study lake and its drainage basin is documented. The report is formatted to provide state environmental agencies with specific information for basin planning [§303(e)], water quality criteria/standards review [§303(c)], clean lakes [§314(a,b)], and water quality monitoring [§106 and §305(b)] activities mandated by the Federal Water Pollution Control Act Amendments of 1972.

* The lake discussed in this report was included in the National eutrophication Survey as a water body of interest to the Michigan Department of Natural Resources. Tributaries and nutrient sources were not sampled, and this report relates only to the data obtained from lake sampling.

Beyond the single lake analysis, broader based correlations between nutrient concentrations (and loading) and trophic condition are being made to advance the rationale and data base for refinement of nutrient water quality criteria for the Nation's fresh water lakes. Likewise, multivariate evaluations for the relationships between land use, nutrient export, and trophic condition, by lake class or use, are being developed to assist in the formulation of planning guidelines and policies by EPA and to augment plans implementation by the states.

ACKNOWLEDGMENT

The staff of the National Eutrophication Survey (Office of Research & Development, U. S. Environmental Protection Agency) expresses sincere appreciation to the Michigan Department of Natural Resources for professional involvement and to the Michigan National Guard for conducting the tributary sampling phase of the Survey.

A. Gene Gazlay, former Director, and David H. Jenkins, Acting Director, Michigan Department of Natural Resources; and Carlos Fetterolf, Chief Environmental Scientist, and Dennis Tierney, Aquatic Biologist, Bureau of Water Management, Department of Natural Resources, provided invaluable lake documentation and counsel during the course of the Survey. John Vogt, Chief of the Bureau of Environmental Health, Michigan Department of Public Health, and his staff were most helpful in identfying point sources and soliciting municipal participation in the Survey.

Major General Clarence A. Schnipke (Retired), then the Adjutant General of Michigan, and Project Officer Colonel Albert W. Lesky, who directed the volunteer efforts of the Michigan National Guardsmen, are also gratefully acknowledged for their assistance to the Survey.

BOARDMAN HYDRO POND

STORET NO. 26A2

I. INTRODUCTION

Boardman Hydro Pond was included in the National Eutrophication Survey as a water body of interest to the Michigan Department of Natural Resources. Tributaries and nutrient sources were not sampled, and this report relates only to the data from lake sampling.

II. CONCLUSIONS

A. Trophic Condition:

Survey data indicate that Boardman Hydro Pond is oligotrophic. Of the 35 Michigan lakes sampled in the fall of 1972 when essentially all were well-mixed, none had less mean total and mean dissolved phosphorus, and ten had less mean inorganic nitrogen; of all 41 lakes sampled, only one had less mean chlorophyll a, and only two had a greater mean Secchi disc transparency*.

B. Rate-Limiting Nutrient:

The algal assay results indicate that phosphorus was the limiting nutrient at the time the sample was collected. The lake data also indicate phosphorus limitation at the other sampling times as well; i.e., N/P ratios were greater than 60/1 on both occasions.

---

* See Appendix A.

III. LAKE CHARACTERISTICS

A. Lake Morphometry*:

1. Surface area: 77 acres.
2. Mean depth: 24.8 feet.
3. Maximum depth: >27 feet.
4. Volume: 1,910 acre-feet.

B. Precipitation**:

1. Year of sampling: 36.8 inches.
2. Mean annual: 37.8 inches.

---

* Fetterolf, 1973.
** See Working Paper No. 1, "Survey Methods, 1972".

IV. LAKE WATER QUALITY SUMMARY

Boardman Hydro Pond was sampled three times during the open-water season of 1972 by means of a pontoon-equipped Huey helicopter. Each time, samples for physical and chemical parameters were collected from two stations on the pond and from a number of depths at each station (see map, page v). During each visit, a single depth-integrated (15 feet or near bottom to surface) sample was composited from the stations for phytoplankton identification and enumeration; and during the second visit, a single 18.9-liter depth-integrated sample was composited for algal assays. Also each time, a depth-integrated sample was collected from each of the stations for chlorophyll a analysis. The maximum depths sampled were 15 feet at station 1 and 27 feet at station 2.

The results obtained are presented in full in Appendix B, and the data for the fall sampling period, when the pond essentially was well-mixed, are summarized below. Note, however, the Secchi disc summary is based on all values.

For differences in the various parameters at the other sampling times, refer to Appendix B.

A. Physical and chemical characteristics:

Parameter	Minimum	Mean	Median	Maximum
		FALL VALUES (11/12/72)		
Temperature (Cent.)	6.4	6.5	6.5	6.5
Dissolved oxygen (mg/l)	10.6	10.7	10.7	10.8
Conductivity (μmhos)	315	319	320	320
pH (units)	7.8	7.8	7.8	7.8
Alkalinity (mg/l)	144	150	149	153
Total P (mg/l)	0.005	0.006	0.006	0.009
Dissolved P (mg/l)	0.004	0.005	0.004	0.007
NO_2 + NO_3 (mg/l)	0.310	0.318	0.310	0.340
Ammonia (mg/l)	0.040	0.040	0.040	0.040
		ALL VALUES		
Secchi disc (inches)	96	137	138	169

B. Biological characteristics:

1. Phytoplankton -

Sampling Date	Dominant Genera	Number per ml
06/17/72	1. Dinobryon	157
	2. Cocconeis	132
	3. Achnanthes	103
	4. Navicula	52
	5. Synedra	49
	Other genera	118
	Total	611
09/15/72	1. Dinobryon	177
	2. Achnanthes	170
	3. Navicula	112
	4. Fragilaria	90
	5. Cymbella	69
	Other genera	293
	Total	911
11/12/72	1. Achnanthes	80
	2. Navicula	65
	3. Cymbella	38
	4. Cocconeis	29
	5. Synedra	29
	Other genera	53
	Total	294

2. Chlorophyll a -
(Because of instrumentation problems during the 1972 sampling, the following values may be in error by plus or minus 20 percent.)

Sampling Date	Station Number	Chlorophyll a (µg/l)
06/17/72	01	3.9
	02	1.0
09/15/72	01	0.4
	02	1.1
11/12/72	01	0.4
	02	0.8

C. Limiting Nutrient Study:

1. Autoclaved, filtered, and nutrient spiked -

Spike (mg/l)	Ortho P Conc. (mg/l)	Inorganic N Conc. (mg/l)	Maximum yield (mg/l-dry wt.)
Control	0.001	0.278	0.1
0.010 P	0.011	0.278	3.5
0.020 P	0.021	0.278	7.4
0.050 P	0.051	0.278	8.0
0.050 P + 10.0 N	0.051	10.278	27.4
10.0 N	0.001	10.278	0.1

2. Discussion -

The control yield of the assay alga, Selenastrum capricornutum, indicates that the potential primary productivity of Boardman Hydro Pond was quite low at the time the assay sample was taken (09/15/72). Also, the increased yields with increased levels of orthophosphate show that the pond was phosphorus limited (note the lack of yield response when only nitrogen was added).

The lake data indicate phosphorus limitation in June (N/P = 64/1) and November (N/P = 72/1) as well.
